

What is claimed is:

1. A remote control terminal comprising:

a service manager for managing predetermined services;  
input means for selecting of the predetermined services  
5 provided from the service manager;

obtaining means for obtaining information corresponding  
to a service selected by the input means from the service  
manager; and

displaying means for displaying the information

10 corresponding to the service obtained by the obtaining means.

2. A remote control terminal as set forth in claim 1,  
further comprising:

15 storing means for storing a plurality of pieces of  
instruction information, wherein the pieces of instruction  
information show procedures for obtaining the services;

the input means selects of a plurality of pieces of  
instruction information stored in the storing means showing  
procedures for obtaining the services;

20 the obtaining means obtains the instruction information  
selected by the input means from the storing means; and

the displaying means displays the instruction  
information obtained by the obtaining means.

25 3. A remote control terminal as set forth in claim 1,  
wherein the remote control terminal works as a telephone.

4. A remote control terminal as set forth in claim 1 ,  
wherein the remote control terminal is provided in a guest room.

5. A remote control terminal as set forth in claim 4,  
wherein:

5           the input means detects a telephone; and  
          the obtaining means communicates the telephone selected  
by the input means.

6. A remote control terminal as set forth in claim 1,  
further comprising:

10          speech recognition means for recognizing speech as a  
character string; wherein,  
          the obtaining means obtains from the service manager  
information corresponding to a service related to the character  
string ; and  
15          the displaying means displays the information.

7. A remote control terminal as set forth in claim 1,  
wherein:

20          the input means allows selection of images taken by a  
plurality of cameras provided in a game arcade for taking  
images of a situation in the game arcade;  
          the obtaining means obtains at least one of the images  
selected by the input means as information corresponding to the  
service; and  
25          the displaying means displays the image obtained by the  
obtaining means.

8. A remote control terminal as set forth in claim 1,  
wherein the obtaining means controls an electric device.

9. A remote control terminal as set forth in claim 8,  
wherein the electric device is an air conditioner, audio  
equipment, a video, a camera, a printer, or a personal computer.

5

10. A remote control terminal as set forth in claim 8,  
wherein the obtaining means is connected to the Internet.

11. A remote control terminal comprising:  
10 a service manager for managing predetermined services;  
an input section for selecting of the predetermined  
services provided from the service manager;  
an obtainier for obtaining information corresponding to  
a service selected by the input section from the service  
15 manager; and  
a display for displaying the information corresponding  
to the service obtained by the obtainier.
